

User Testing Plan & Report for "Explore Talgar" website

Task 1:

Explore the list of resorts and choose one that looks suitable for a family weekend.

(This tests how well users can navigate resort cards, understand visuals, and use "More Details" and "Book Now" buttons.)

Task 2:

Find the contact information for organizing a corporate event.

(This tests visibility and clarity of the phone/email contacts across pages and understanding of service sections.)

Task 3:

View details about one of the available services such as horse riding, yurt rental, or excursions.

(This tests how well users browse service descriptions and interpret activity-related content.)

Post-Test Interview Questions

1. Was it easy to find what you were looking for?
2. Did any part of the website feel confusing or unclear?
3. How did the design make you feel – was it trustworthy, appealing, or boring?
4. Was the booking/contact process simple?
5. What would you suggest we improve or change?
6. Did anything break, load slowly, or behave unexpectedly?

Individual User Reports

User 1: Amina T.

Age: 33

Questions asked: Amina asked if the resort images could be zoomed in for better room detail.

Answer: I explained this feature was not yet added, but it's a great idea for a future update.

Navigation issues: She was unsure if "More Details" would lead to a booking option but figured it out quickly.

Observations: Amina successfully explored resorts and selected one for a family weekend. She commented that the website felt warm and inviting, especially the nature-themed visuals. She mentioned that extra filters (like "Family Friendly") would make searching easier but understood it wasn't currently available. She also liked the fact that the contact information was visible without needing to be searched.

User 2: Damir K.

Age: 26

Questions asked: Asked whether it's possible to compare resorts side-by-side.

Answer: I told him this feature doesn't exist yet but could be part of a future improvement.

Navigation issues: He pointed out that the contact section in the footer could be more visually distinct to avoid blending in with the rest of the content.

Observations: Damir completed tasks quickly and found the design clean and straightforward. He appreciated the visible contact info but suggested a

more interactive feature like a form pop-up instead of only email/phone. He also proposed adding an "Add to Favorites" function in the future to help users remember preferred resorts.

User Test Summary

Overall, I am pleased with how my “Explore Talgar” website performed during real user testing. Both Amina and Damir were able to complete the tasks without needing step-by-step instructions, showing that the structure and navigation are intuitive. The serene visuals, calming color palette, and clear section labels supported the user journey, especially when browsing for resorts or services.

From the testing, I gained valuable insights into **micro-usability improvements**. For example, Amina expected additional search assistance (such as filters for family-friendly options), and Damir expected a resort comparison or “Favorites” feature. These ideas weren’t part of the current version, but their feedback highlights where users intuitively look for help when making decisions.

Both users appreciated the consistent visibility of the contact details and the simplicity of the “Book Now” and “More Details” buttons. However, Damir did note that the contact section in the footer could blend in too much, and a pop-up contact form might help drive more engagement. Amina also suggested being able to enlarge room images to better assess accommodation.

If I could redo the prototype, I would include some basic interactivity like image zoom, a Resort Wishlist, and a contact form modal. One limitation I faced was working with static content and without real-time booking or filter capabilities.

Looking forward, this project has great potential to scale — adding booking calendars, real-time pricing, multi-language support, and personalization

features like saved trips. These changes would turn “Explore Talgar” into a robust platform that promotes local tourism with a user-focused experience.
